Internet access that's easy to manage, scalable and quick to provision

Gaohong Internet Access Service makes internet access easy with flexible bandwidth choices and quick provisioning, all in a single invoice with your other Gaohong services. Available in all Gaohong data centers in Shanghai, Gaohong Internet Access Service allows you to grow as your needs grow with scalable bandwidth options to meet your emerging usage requirements. Whether you are deploying applications to optimize performance or distributing data, Gaohong Internet Access Service delivers. Connect to the people, places and opportunities that matter for your digital future.

Benefits

- **Simplified management**—one trusted point of contact for IP service and one invoice.

- **Fast to activate**—ready-to-use Layer 3 solution.

- **Redundant**—each market has at least two upstream provider links for redundancy.

- **Rich SaaS ecosystem**—highly localized access to top SaaS service providers.

- **Easy to scale**—scale bandwidth commitments to meet emerging demand and use.

- **Flexible configurations**—several product options available for port speeds, static routing.

- **Availability**—consistent platform available in 4 Gaohong data centers in Shanghai.

Use cases

Out-of-Band Management

- Independent/diverse back door for managing servers and networks separate from your primary internet access or when primary internet access is not available.

- Useful for initial build configurations and ongoing support.

Primary Internet Service

- Main source of internet access for IP transit needs, including locally optimized public SaaS reachability

- Flexible and scalable bandwidth plans, single- or dual-port options, static routing, and additional IPv4 addresses for your colocation infrastructure.

Secondary Internet Service

- Non-primary internet access as a backup to carrier-direct services.

- Locally optimized public SaaS reachability to augment primary service.

- Flexible and scalable bandwidth plans, single- or dual-port options, static routing choices, and additional IPv4 addresses for your colocation infrastructure.

Technical Specifications

- 24/7 Network Operations Center support

- Gigabit Ethernet or 10 Gigabit port speeds

- Single- or dual-port deployment options

- Link aggregation

- IPv4 allocations available
  (additional IP allocations available upon request)

- Static routing

- Flexible minimum bandwidth commitments

- Availability SLA
